

JCAS in 6G:

A Software Tool for Scalable Performance Evaluation

F. Baccelli, N. Soprano-Loto, E. Mengoli
INRIA Paris

EUCNC 6G 2025

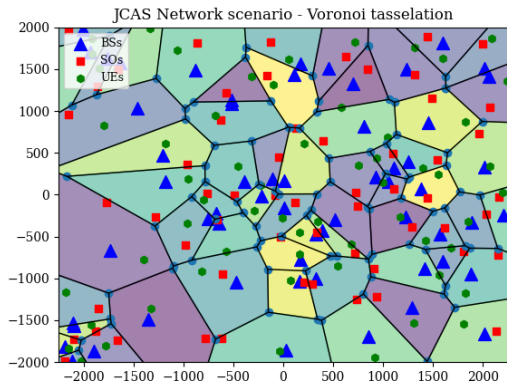

- **Vision:** Seamless fusion of communication and sensing. Smarter **spectrum** use.
- **Goal:** One system, dual purpose. Design efficient **transmission policies**.
- **Challenge:** How to evaluate **JCAS performances** at **scale**?

Our Contribution

Analytical framework and simulation **software**
to analyze **sensing–communication** interplay at **scale**.

Join us for a live walkthrough at the demo station.

- **Quantitative analysis** of sensing–communication interplay.
- Real-time visualizations: **communication performance** and **estimation accuracy**.
- **Custom scenarios**: user mobility, fading, network geometry.

Design Your Scenario

- Customize **topology** and **motion**.
- Configure **radio environment** (fading, path loss, power, etc.).
- Set **mode** and tune comm/sensing **parameters**.

Experience it in action — at our demo station!
